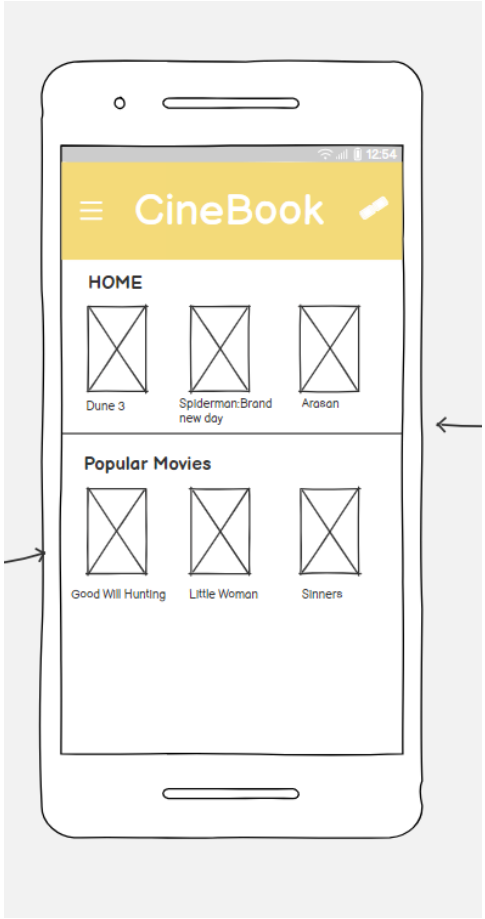
Page 1:



1. Home Page

This is the first screen users see when they open the app. It gives a quick overview of what’s available.

At the top there’s a navigation bar with the app name CineBook and a menu icon.

Below that, featured or recommended movies are displayed in a grid format with posters.

There’s also a “Popular Movies” section, helping users quickly discover trending films.

The layout is simple and visual, encouraging users to browse and pick a movie easily.

Page 2:

2. Movie List Page

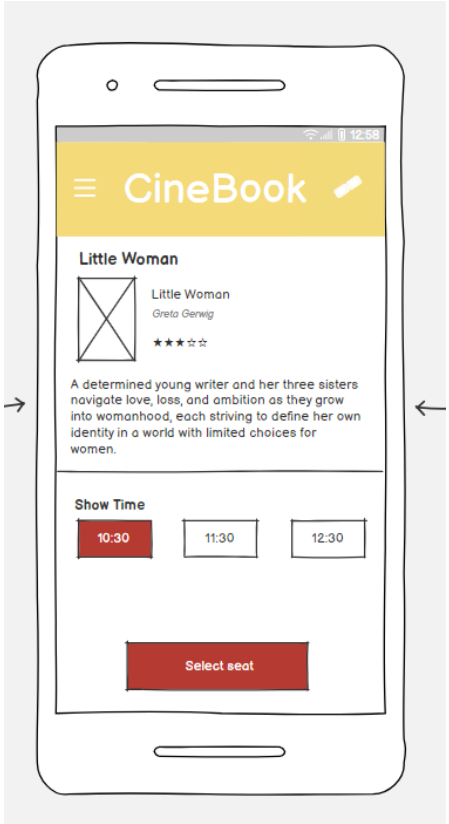
This page shows a scrollable list of movies with basic details.

Each movie appears with a small poster, title, and rating.

The layout is clean and vertical, making it easy to scan multiple options.

Users can tap on any movie to view more details.

Page 3:



3. Movie Details Page

This screen focuses on a single movie.

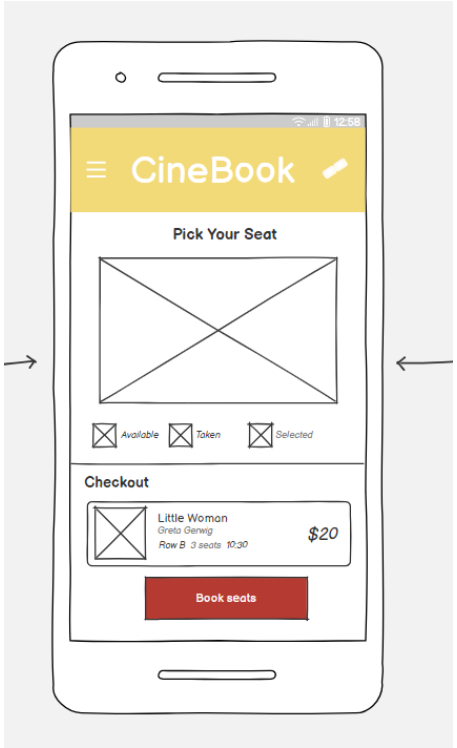
Displays the movie poster, title, genre, and rating and log line.

Includes a short log line of the film.

Shows available show timings (like 10:30, 11:30, 12:30).

A “Select Seat” button is placed at the bottom.

Page 4:



This is where the booking becomes interactive.

A seating layout is displayed with different seat statuses:

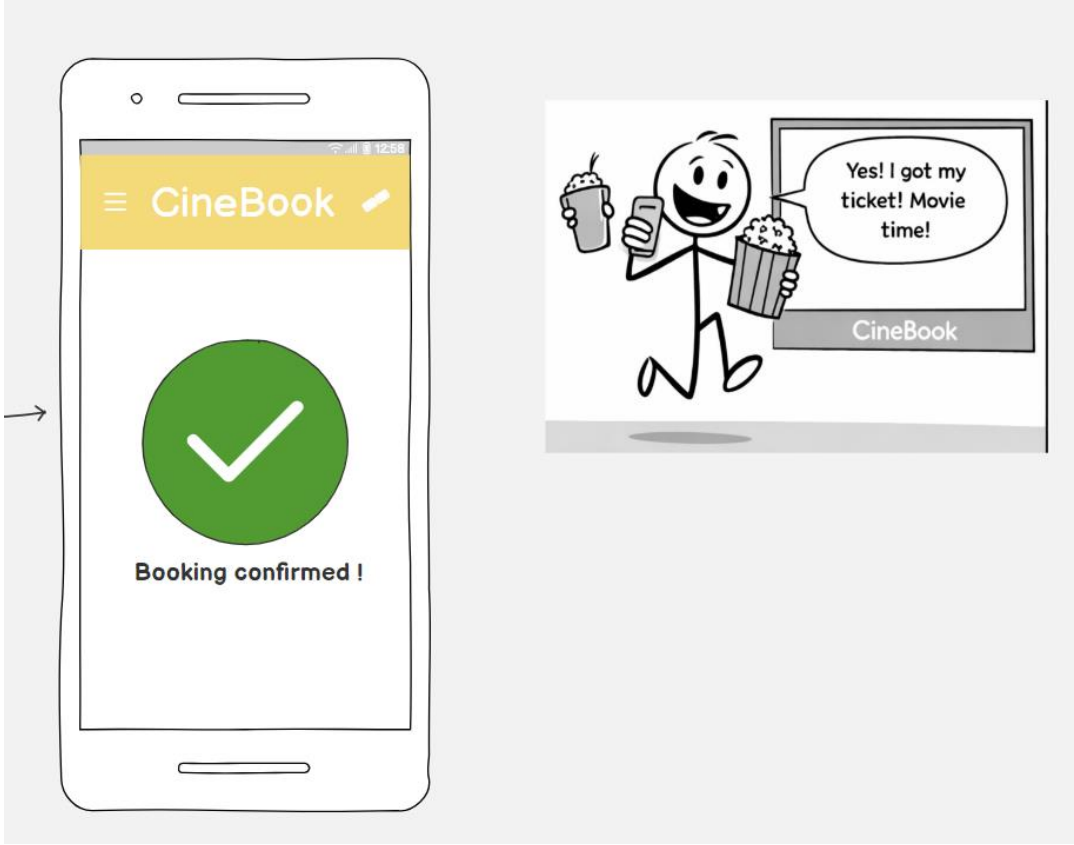
- Available seats
- Booked seats
- Selected seats
- Users can tap to choose their preferred seats.

A small summary section shows:

- Movie name
- Number of seats selected
- Total price

A “Book Seats” button confirms the selection.

Page 5:



This is the final screen after booking.

A big green checkmark gives a clear success signal.

A message like “Booking Confirmed!” reassures the user.

Minimal design to avoid confusion.
